- Production at Palmarejo continues to transition to higher-margin underground mining at the Guadalupe mine and - beginning in early 2016 - the nearby Independencia deposit.
- Production from higher-grade areas of the historic underground zones contributed to higher underground gold grades and gold production during the second quarter.
- Underground mining from Guadalupe is on track to reach 1,500 tons per day in the third quarter.
- Development rates on the 1,000 meter decline to the high-grade Independencia Este deposit are now accelerating.
- Higher recovery rates for both silver and gold are expected in the second half of 2015 due to higher expected proportions of Guadalupe ore and sulfide in the mill feed from the historic zones, and from improved process control instrumentation.

- Silver equivalent production increased 16% compared to the first quarter at Rochester, despite lower grades and a decline in tons placed, as ounces recovered from the Stage III leach pad continue to ramp up.
- Silver equivalent production is expected to increase by 15% - 30% at 3% - 14% lower unit costs in 2015 compared to 2014.

Kensington, Alaska	2Q 2015	1Q 2015	4Q 2014	3Q 2014	2Q 2014

- Mill throughput averaged a robust 1,875 tons per day during the second quarter, partially offsetting a decline in head grades.
- Coeur released a re-scoped mine plan for Kensington on April 14, 2015, which reflects the impact of new high-grade mineralization from the Jualin deposit. By 2018 when Jualin is planned to be fully ramped up, Kensington is expected to produce 149,000 gold ounces, up 26% from 2014.
- Work on the decline into the Jualin deposit is expected to begin this month.
